PROFESSIONAL SUMMARY

Full-stack Java engineer with **5+ years at Capgemini** building enterprise web applications for the **French Ministry of National Education**, including **Livret de Parcours Inclusif (LPI)** and **Faits Établissement**. I work across the full lifecycle with **Java, Spring Boot, Spring Security, JPA/Hibernate, Thymeleaf and Angular** on **IBM DB2**: new features, corrective maintenance, production support, releases, database migrations and batch processes.
Over the last year I have specialised in **secure software development**. During the remediation of a **technical security audit** I implemented most of the fixes myself as part of the team: **SAML2 authentication**, **role-based access control**, **secure cookie and session handling** and a **stronger cryptographic PIN generation algorithm**. I also worked on **CSRF** protection, code hardening and **vulnerability remediation**. In 2025 I completed the **Official Specialisation Course in Cybersecurity for IT Environments** with a grade of **8.83/10**.
I work in English and French on a daily basis (English C1, French B1) and I am looking for a **100 % remote** role in backend/full-stack Java or secure enterprise applications, in an international team.

EXPERIENCE

Software Engineer — Capgemini · Murcia, Spain · Jun 2021 – present
Full-stack Java developer — French Ministry of National Education (national-scope applications: Livret de Parcours Inclusif, Faits Établissement)

- **Developed accessibility features for LPI**, an internal Ministry platform that digitises support plans and processes for **students with special educational needs across France**, used by teaching staff nationwide.
- **Contributed to the migration of the production database from MySQL to IBM DB2**: schema changes and **Liquibase** changesets, data migration support and resolution of production incidents.
- **Implemented most of the security audit remediation myself as part of the team: SAML2 authentication, role-based access control, secure cookie and session handling and a stronger cryptographic PIN generation algorithm**; also worked on **CSRF** protection, code hardening and **vulnerability remediation**.
- **Contributed to raising customer satisfaction from 3.5 to 4.23 / 5 in the first year**, through proactive issue resolution and consistent delivery quality.
- **Onboarded and mentored 2 new team members** (functional and technical training, troubleshooting support).
- Resolved **1-2 production blockers per month** in a **team of about 10 people**, with thousands of active users on the platform.
- Stack: Java, Spring Boot, Spring Security, JPA/Hibernate, Thymeleaf, Angular, TypeScript, IBM DB2, MySQL, Liquibase, GitLab (self-hosted), Jira/Confluence, Scrum / SAFe.

API testing & production support — Telia Sweden / Finland (assignment within the same role)

- **Tested APIs with Postman** and with the client's internal **Spock-based test tooling**.
- **Monitored production and resolved B2B incidents** to keep critical telecom services stable.

Junior Java Programmer (internship) — Capgemini · Murcia, Spain · Mar 2021 – May 2021
French Ministry of Culture.

- Delivered enhancements to the ministry's cultural-events reporting application, **improving data accuracy and report generation**.

SKILLS

Core Java · Spring Boot · Spring Security · JPA/Hibernate · REST APIs · Angular · TypeScript · JavaScript · HTML5 / CSS3 · SQL (IBM DB2, MySQL, PostgreSQL) · Git / GitLab · Maven · Docker · Linux · Scrum / SAFe
Secure development SAML2 authentication · role-based access control · CSRF · secure cookies · session management · code hardening · vulnerability remediation · cryptographic PIN generation · secure deployment · network security fundamentals
Testing & support Postman · API testing · Spock-based tooling · production monitoring · incident troubleshooting · Jira / Confluence
AI-assisted engineering OpenCode · GitHub Copilot — code analysis, documentation and test

preparation, always with manual review and security awareness
Also used Thymeleaf · Laravel · JSP · JBoss · Tomcat · Elasticsearch · Node.js · Python · Liquibase · microservices · hexagonal architecture · UML · unit testing · Bash

CERTIFICATIONS

- **AWS Academy Cloud Foundations** — Amazon Web Services
- **Generative AI on AWS Essentials** (Discover IaaS Products) — AWS / Capgemini
- **ACTIVATE AI Foundation Badge** — Capgemini

HOME LAB / SELF-HOSTED SYSTEMS

I also practise on my own infrastructure what I do not get to touch at work:

- I provision and operate my own **Linux servers** — cloud instances and hardware at home — with **containers, VPN and SSH tunnelling**, security hardening and resource tuning on deliberately small machines.
- I run **self-hosted network services** and have experimented with **local language models**, which has given me practical judgement on operations rather than only on development.
- Happy to go into the specifics in an interview.

EDUCATION

- **Specialisation Course in Cybersecurity for IT Environments** (Curso de Especialización / Máster de FP en Ciberseguridad en Entornos de las Tecnologías de la Información — official vocational-education postgraduate qualification) — IES Ingeniero de la Cierva · grade **8.83 / 10**
- **Higher Vocational Diploma in Multiplatform Application Development** (Técnico Superior en Desarrollo de Aplicaciones Multiplataforma, EQF 5) — IES Ingeniero de la Cierva · first year credited from the Web Development diploma, as both were studied consecutively
- **Higher Vocational Diploma in Web Application Development** (Técnico Superior en Desarrollo de Aplicaciones Web, EQF 5) — IES Ingeniero de la Cierva
- **English C1** — EOI Cartagena

LANGUAGES

- **Spanish** — native
- **English** — C1 (daily working language for 5 years; interviews in English)
- **French** — B1 (daily written and spoken work with French public-sector clients)

Personal data (date of birth, nationality, phone) deliberately left out. First contact by LinkedIn or email; phone available on request through LinkedIn. References available on request.
